TECHNICAL SKILLS

- Languages
Python · Java · SQL
- ML / NLP
PyTorch · Hugging Face · LLM Fine-tuning
· scikit-learn · NLTK · RAG · BERTopic
- Bioinformatics
AlphaFold · protein structure prediction
- Data
NumPy · Pandas · Matplotlib · Seaborn
- Infrastructure
Linux · HPC/SLURM · Git · ROS2

LANGUAGES

- Arabic — Native
English — C1
German — B2

INTERESTS

- Jogging
Board Games
Creative Writing

Sulaeman Aloradi

PROFILE

M.Sc. Computer Science candidate at the University of Bonn, about to graduate, with hands-on research across DLR, Fraunhofer ISE, UKB, and b-it. Specialising in generative AI, transformer fine-tuning, and production NLP pipelines. Seeking full-time roles in Data Science, NLP, or Machine Learning in Germany.

WORK EXPERIENCE

Working Student — Computational Biology 07/2026 – present
Universitätsklinikum Bonn (UKB), Bonn

- Protein structure prediction using AlphaFold2 for biomedical research at University Hospital Bonn.
- Analyse predicted 3D structures to support research on disease-associated protein variants and drug-target interactions.
- Collaborate with clinical researchers to integrate computational structure predictions into experimental biological workflows.

Working Student — Master's Thesis, NLP Research 04/2026 – present
Deutsches Zentrum für Luft- und Raumfahrt (DLR), Jena

- Developing an unsupervised NLP pipeline for fine-grained topic classification of a multilingual web corpus exceeding 685,000 documents, as part of the OpenSearch@DLR 2.0 initiative.
- Applying multilingual embedding models (Sentence-BERT family), BERTopic, LDA, and lbl2vec to cluster and semantically label the corpus across multiple languages.
- Evaluating topic and cluster quality using silhouette scores, coherence metrics, and structured human assessment protocols.
- Collaborating within an interdisciplinary team spanning DLR Jena and the University of Bonn.

Working Student — Scientific Research 11/2025 – 06/2026
Fraunhofer Institute for Solar Energy Systems (ISE), Freiburg · Battery Cell Technology Group

- Maintained and further developed evaluation and processing software for battery measurement data within the Battery Cell Technology group.
- Managed version control of the developed software using GitLab, including branching and merge-request workflows.
- Authored technical documentation for the software development, ensuring reproducibility and maintainability for the research team.

Working Student — NLP 04/2025 – 09/2025
Bonn-Aachen International Center for Information Technology (b-it), Bonn

- Fine-tuned transformer models (GPT-2, SciFive, BioBERT) for named entity recognition, question answering, natural language inference, and relation extraction on biomedical text.
- Built and benchmarked QA and information-extraction pipelines that outperformed BERT and BioBERT baselines across multiple evaluation datasets.
- Designed and evaluated retrieval-augmented generation (RAG) systems for biomedical knowledge retrieval, comparing dense vs. sparse retrieval strategies.
- Ran reinforcement learning pipelines on HPC/SLURM clusters; evaluated LLMs for accuracy, inference latency, and adversarial robustness.

EDUCATION

M.Sc. Computer Science 04/2023 – present
Rheinische Friedrich-Wilhelms-Universität Bonn

Thesis: Unsupervised topic modelling for multilingual web corpora · Focus: NLP, Machine Learning

B.Sc. Computer Science 09/2018 – 06/2022
King Abdulaziz University, Jeddah, Saudi Arabia

Thesis: Recommendation system for educational material quality assessment

Projects & Open-Source Work
